- (54) Title:** ELECTRICAL TERMINAL HAVING RESISTANCE AGAINST MATING TERMINAL REMOVAL

(57) Abstract: An electrical terminal is provided for mating with a blade-like mating terminal. The electrical terminal includes a base having a front mating end and a rear terminating end. A spring arm is folded rearwardly over the base from the front mating end thereof to a rear bowed end of the spring arm. A contact arm is folded back forwardly from the rear bowed end beneath the spring arm above the base and spaced therefrom for receiving the blade-like mating terminal inserted between the contact arm and the base. A sharp edge is formed on the contact arm facing the rear terminating end of the base and engageable with the blade-like mating terminal to resist unmating of the terminals.
